- More Convenient

It's really easy with atFAX. Send fax from MFD and email and receive to email, without the need for fax hardware or fax lines.

atFAX eliminates the need for your organisation to invest in, manage and administer fax, integrating with your email so you only have to manage one system.

atFAX allows you to send faxes from your MFD and email without the need for fax devices or fax lines.

Faxes are received by email as standard, however if you wish to print faxes you can do that to.

Faxes may also be received into email and printed simultaneously.

Better still with atFAX you can send and receive up to five faxes simultaneously.

atFAX eliminates your fax infrastructure. No analogue line, analogue telephone adapter (ATA) and cabling costs and no administration overheads.

If you need to move your MFD there is no need to install new cabling and telephone sockets.

With digital lines (ISDN) making way for VoIP telephony, atFAX is the perfect solution. There is no need for you to accommodate fax and no reliability concerns.

atFAX is leading edge, new age fax technology. It is easy to use and packed full of features not found on traditional fax hardware.

Eliminate your old fax technology, reduce your costs and fax smarter
